# EasyWorks S Progressive

A great product portfolio meets all market needs and helps create differentiation. LensWorks Lab offers a non-personalized lens that is entirely different than any other in its market segment. Alternative design configurations are available for specific visual needs or lifestyles.

**EasyWorks S Progressive** lenses incorporate **Steady Methodology** to enhance image stability and reduce swim effect. Swim effect is a non-stable perception of the surroundings that causes discomfort, and reduces overall lens satisfaction, making adaptation more difficult. **EasyWorks S Progressive** lenses provide wearers with more stable and natural vision.

## Superior image stability for more comfortable vision

Steady Methodology is a technological breakthrough in free-form, digital lenses. In addition to controlling for unwanted cylinder power, Steady Methodology addresses unwanted changes to mean power in the lateral areas of the lens. This improves peripheral visual acuity, reduces swim effect, and provides superior image stability and offers more comfortable vision.

### Ideal Wearer

Those in need of a high value, reliable solution. Part time eyeglass wearers and wearers with lower prescription and addition powers.

EasyWorks S | Balanced Configuration

### Features & Benefits

- Non-compensated progressive lens
- Balanced design
- Technology: Steady Methodology
- Precise focus for all working distances
- Higher image stability for reduced swim effect
- Improvement of peripheral visual quality in the distance zone
- High-value solution
- Compatible with virtually any lens material & coating
- MFHs: 14, 16, & 18 mm
